

40 YEARS STRONG

Here at WRL General Contractors, we are celebrating 40 years in the construction business. Our company was founded by William Robert Leavine and his wife Sharon in New Mexico in 1979. Less than a decade into business, they moved their operation to Tyler, Texas and have been here ever since. East Texas has been home to WRL for more than 30 years and as you drive through Tyler and the surrounding towns, you are surrounded by schools, churches, hospitals, and other commercial buildings that WRL has built. In the process of building the

communities around us, we have also built lasting relationships with our clients, subcontractors, and design teams. Seeing a project come together and being completed on schedule and on budget is a great feeling, but the true satisfaction comes when clients come back to us again and again to build their next project.

Melynda Hensley, Vice President of WRL said it best by saying, "We will continue to provide best-in-class service to our clients and always strive to exceed their expectations. Forty years is just the beginning for WRL General Contractors."

MORE TOOLS WITH PROCORE

If you have worked with us on any project in the last 5 years, either as an architect, subcontractor, or otherwise, you have used Procore. If you aren't one of the lucky ones to have experienced Procore yet, Procore is a cloud-based construction management software and it has changed the way we do business. And in 2019, Procore is doing even more for our business. This year we will be taking advantage of more features offered by Procore which will help streamline our processes even further. These features include: DocuSign, Sage, and Buildrtech.

DocuSign has over 200 million users worldwide and they are now integrated with Procore. This will allow all Procore users to send, receive, review and return their signed documents and contracts online, at any time and from any Internet-enabled device, all from within Procore. Currently, our Project Administrators setup the contracts and email them to subcontractors who then print them out, sign them, scan them, and email them back. With the integration of DocuSign in Procore, we can now skip the paper and complete the contracts digitally. With a simple click on their computer screen or tap on their smart phone, our subcontractors can sign the contracts and send them back to us.

Sage is a world-recognized provider of accounting software. We have used Sage for our project accounting needs for more than 20 years and are eager to take advantage of the new partnership between Sage and Procore. The Procore integration with Sage will give the entire project team powerful, simple tools for tracking and recording complex cost impacts in real time. We will be able to monitor numbers as change happens to stay within budget, make better data-driven decisions, and more accurately forecast to future-proof margins. Change events can be created directly from mobile devices, even in the field, allowing us to see the impact and take action to minimize cost exposure.

And the last new feature we are adding to our Procore toolbox is **Buildrtech**. Buildrtech will allow us to save time and turn out a quality, end of job, closeout package for our clients. This program, which integrates with Procore using information we already have, allows us to automate the collection and management of documents from subcontractors, easily track the closeout progress, and when the data is ready, provide a turnover package that matches the quality of our work.

All three of these features will be implemented during 2019 and we are looking forward to seeing the impact it makes on our projects.
